

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for providing a search result to a user, comprising:
 - receiving a search query from a client device;
 - generating at least one search result in response to the search query, the search result being associated with a search result document link to a search result document, the search result including a plurality of snippets extracted from the search result document;
 - generating an instruction corresponding to the search result, the instruction being to a document browser to display the search result on the client device and to simultaneously display a plurality of frames in a frame set, each frame corresponding to a different corresponding one of the snippets and displaying at least a portion of the snippet, and to navigate directly to a portion of one of the snippets within the search result document when that snippet is selected by a user; ~~the instruction being to navigate directly to an intra-document portion within the search result document when the search result is selected by the user, the intra-document portion being related to the search query~~; and
 - providing the search result to the user client device.
2. (Canceled).
3. (Canceled).
4. (Currently Amended) The method of claim 1, wherein the instruction ~~[[is]]~~ includes an intra-document link for each snippet, each intra-document link pointing to the intra-document portion of the snippet within the search result document, the intra-document portion being related to the search query.

5. (Currently Amended) The method of claim 4, wherein ~~[[the]]~~ each intra-document link contains an artificial anchor undefined in the search result document.

6. (Currently Amended) The method of claim 5, wherein ~~[[the]]~~ each artificial anchor includes a preassigned artificial anchor designator designating the anchor as artificial.

7. (Currently Amended) The method of claim 6, wherein ~~[[the]]~~ each artificial anchor includes the preassigned artificial anchor designator as one of a prefix and a suffix and wherein the preassigned artificial anchor designator includes a preassigned set of text characters.

8. (Currently Amended) The method of claim 4, wherein ~~[[the]]~~ each intra-document link points to an anchor ~~at the intra-document portion, the anchor being~~ defined in the search result document.

9. (Original) The method of claim 4, further comprising:
determining whether the search result document link references an anchor defined in the search result document; and
stripping the reference to the anchor from the search result document link if the search result document link references the anchor.

10. (Canceled).

11. (Currently Amended) The method of claim 1, wherein the providing the search result to the ~~[[user]]~~ client device includes providing a search result page, wherein the instruction is at least one of a hidden tag and an attribute on a tag in the search result page.

12 – 34. (Canceled).

35. (Currently Amended) A computer program product embodied on a computer-readable medium, the computer program product including instructions, which when executed by a computer system, are operable to cause the computer system to perform acts comprising:

generating at least one search result in response to receiving a search query from a ~~user~~ client device, the search result being associated with a search result document and including a plurality of snippets extracted from the search result document; ~~link to a search result document;~~

generating an instruction corresponding to the search result, the instruction being to a document browser to display the search result on the client device and to simultaneously display a plurality of frames in a frame set, each frame corresponding to a different corresponding one of the snippets and displaying at least a portion of the snippet, and to navigate directly to a portion of one of the snippets within the search result document when that snippet is selected by a user; ~~the instruction being to navigate directly to the intra-document portion within the search result document when the search result is selected by the user, the intra-document portion being related to the search query;~~ and

providing the search result to the client device. ~~user.~~

36. (Canceled).

37. (Currently Amended) The computer program product of claim 35, wherein the instruction ~~[[is]]~~ includes an intra-document link for each snippet, each intra-document link pointing to the ~~intra-document~~ portion of the snippet within the search result document, ~~the intra-document portion being related to the search query.~~

38. (Currently Amended) The computer program product of claim 37, wherein ~~[[the]]~~ each intra-document link contains an artificial anchor undefined in the search result document.

39. (Currently Amended) The computer program product of claim 38, wherein ~~[[the]]~~ each artificial anchor includes a preassigned artificial anchor designator designating the anchor as artificial.

40. (Currently Amended) The computer program product of claim 39, wherein [[the]] each artificial anchor includes the preassigned artificial anchor designator as one of a prefix and a suffix and wherein the preassigned artificial anchor designator includes a preassigned set of text characters.

41. (Currently Amended) The computer program product of claim 37, wherein [[the]] each intra-document link points to an anchor ~~at the intra document portion, the anchor~~ being defined in the search result document.

42. (Original) The computer program product of claim 37, further comprising:
determining whether the search result document link references an anchor defined in the search result document; and
stripping the reference to the anchor from the search result document link if the search result document link references the anchor.

43. – 58. (Canceled).
